

Checkmarx Software Exposure Platform

Taking a holistic, platform-centric approach, the Software Exposure Platform builds security in from the start of the SDLC, continuously supporting all stages of the DevOps cycle.

The Checkmarx Software Exposure Platform aligns Software Security with DevOps culture, detecting, intelligently prioritizing, and remediating exposure across the software development lifecycle (SDLC) from the coding stage through the runtime application testing stage.

Software Exposure within the Software Development Lifecycle

Bake Software Security in from the start. Checkmarx provides a combination of integrations for the automation required in a fast-paced development environment along with a variety of technologies to empower development and security teams to improve the overall security posture of an organization.
